

What To Do If Someone In Your Home Tests Positive For COVID-19

If a non-CPS student or staff member in the household tests positive for COVID-19, CPS recommends the following:

1. **Return to school, but wear a mask for ten days.**
If the positive individual in the household remains symptomatic for longer than ten days, continue to mask until the household member is no longer symptomatic.

2. **Test on the next immediate Monday and the next immediate Thursday after exposure.**

3. **If you have any of these symptoms of COVID-19, test immediately:**

- Fever 100.4 or higher; chills
- Cough
- Shortness of breath
- Difficulty breathing
- Sore throat
- New loss of taste or smell
- New muscle or body aches
- Nausea, vomiting, diarrhea
- Headache
- Runny nose or congestion
- Fatigue

If you test positive, stay home and self report your results to cps.edu/covidresults.
