Computer Science for All (CS4All) aims to address national racial and gender disparities in the Computer Science field. CPS is confronting that issue by adding Computer Science as a core subject which provides equity, empowerment, and opportunities that maximize the potential of every student to transform and advance their community, nation, and world.

**Coming to a School Near You!**

**DID YOU KNOW...**

1. 600,000 new computing jobs will be created in the United States by 2022? (bls.gov/ooh)
2. Less than 10% of our nation’s high schools offer a Computer Science course? (College Board)
3. CS4All at Chicago Public Schools makes computer science a priority in our schools by teaching children how to code, become critical thinkers and creative problem solvers.
